Full Stack Developer

Dear Hiring Manager,

I am writing to apply for the Full Stack Developer position at your company. With a background in Computer Science and practical experience in web application development, I am interested in contributing my technical skills, problem-solving ability, and willingness to learn to your development team.

During my internship as a Web Application Developer at ABC Technology, I developed an inventory and sales management web application using Django REST Framework and Vue.js. I designed PostgreSQL database structures, developed REST APIs, connected frontend interfaces with backend services, and implemented key features for inventory and sales management. I also tested and debugged application functions to improve system reliability and performance.

My technical skills include HTML, CSS, JavaScript, Vue.js, Django REST Framework, PostgreSQL, REST API development, Git, GitHub, and cloud computing. I enjoy learning new technologies and applying them to real projects. I am especially interested in full stack development because it allows me to work with both frontend and backend systems.

In addition to my development experience, I have worked as a Government Official at the Ministry of Mines and Energy, where I have been involved in financial administration, revenue verification, reporting, system-related tasks, and coordination with different organizations. This experience has strengthened my responsibility, attention to detail, communication, teamwork, and ability to work accurately with important data.

I am motivated to continue developing my career as a Full Stack Developer and to gain more professional experience in software development. I believe my technical knowledge, professional experience, teamwork, and continuous learning mindset would allow me to contribute positively to your organization.

Thank you for considering my application. I would appreciate the opportunity to discuss my qualifications and experience further in an interview. I look forward to the possibility of contributing to your development team.

Sincerely,
CHEA SAROEURN
